PROACT standardizes your RCA methodology and reporting.

PROACT demonstrates Return On Investment for your RCA.

PROACT is applicable in every facet of healthcare.

PROACT helps a facility easily determine the Significant Few.

Products & Services Summary

PROACT® Enterprise Risk Management Software

Healthcare today requires successful, innovative, efficient and cost-effective tools to keep their hospitals safe and reliable for patient care. Driven by demands of accreditation, private payers, government regulators and consumers, healthcare organizations need reliable methods that can help them to successfully reduce the potential for errors, reduce unnecessary rework and reduce variations in work patterns. They want standardization of the measuring and reporting of quality issues. PROACT® will give you the competitive edge.

PROACT® Suite Software

The PROACT® Software Suite combines the LEAP Basic FMEA and Opportunity Analysis processes and the PROACT® Root Cause Analysis process. This software system provides you with powerful tools that offer the capability to meet and exceed the The Joint Commission (TJC) Patient Safety Standards. PROACT allows you to accurately set priorities, develop consistent requirements and then evaluate your progress. PROACT is best known for helping diagnose and fix errors and resolving quality issues.

And, unlike other tools, the PROACT® Suite enables users to recognize cost savings from the investment in the technology. With money and time saved in optimizing patient services, the return on investment in the PROACT® Suite can help expand patient and process improvement initiatives.

LEAP Basic FMEA and OA Software

Identifies what COULD go wrong or what HAS gone wrong, using Basic Failure Modes & Effects Analysis (FMEA) and Opportunity Analysis. The end result is that LEAP builds a business case for which events are the best candidates for Root Cause Analysis (RCA) based on the Return-On-Investment (ROI) calculation.

PROACT® Root Cause Analysis Software

PROACT® RCA software is an automation tool that facilitates analysts' through the RCA process to easily document, validate, report and track findings and recommendations.

PROACT® Root Cause Analysis Methods Training

RCI's courses provide a complete understanding of the PROACT Failure Modes & Effects Analysis (FMEA), Opportunity Analysis (OA) and Root Cause Analysis (RCA) methodology. The attendee will understand all facets about the PROACT System and how to organize the administrative work both manually and electronically.

PROACT® Software Suite Training

The objective of this software training is to assist the user in understanding the conceptual idea behind the PROACT® RCA software application and familiarize them with its functionality. Upon completion of this course, the user will have the skills to complete a thorough Root Cause Analysis within their organization.

PROACT® Consulting

RCI provides on-site consulting services in an array of areas related to Patient Safety and Risk Management. RCI can provide on-site consulting services to support healthcare professionals in the application of Basic FMEA, Opportunity Analyses and Root Cause Analyses. RCI will become a mentor to your Principal Analyst guiding them through the analysis process to ensure their success.

Virtual Consulting Group

RCI also can provide consulting services in the following areas through their partnership with The Virtual Consulting Group:

- Credentialing
- Performance Improvement
- Environment of Care and Safety
- Medical Group Practice Risk Mgmt.
- Governance
- Prenatal Risk Assessment
