Reliability Center, Inc. Announces Release of V.4 - PROACT Root Cause Analysis

(Hopewell, Virginia) -- Through continuous R&D efforts over the past 40+ years, RCI (Reliability Center, Inc.) has now released version 4 of their highly successful PROACT® Investigation Management System. The PROACT® Approach is a cost effective, standardized method for achieving a Reliability culture across an organization. Through the RCI Root Cause Analysis, Risk Training programs and associated tools PROACT® empowers workers at all levels and in a large cross section of business, industry and healthcare to become highly skilled analysts.

PROACT® Version 4 brings significant ease of use. About the new release, Bob Latino, CEO of Reliability, Inc. said, “This new version was several years in the making, and we are very proud of the enhancements that have been made. Our beta-test clients have found Version 4 to be even more user-friendly, particularly appreciating the drag and drop functionality.” There are many other user friendly adaptations to the new release, including the following enhancements:

- Groups can be created and then used to assign staff members to an analysis team.
- Reports can now be generated in Microsoft Word to allow easy editing and customization.
- The Trending Utility allows the user to query on the entire database of analyses using a given set of criteria so trending and tracking of RCA activity is simplified.

A pioneer in the field of Root Cause Analysis, Reliability Center Inc., has been offering innovative, disciplined, and field-proven products to increase productivity and profitability with Opportunity Analysis (OA), Root Cause Analysis (RCA) and Human Error Reduction Strategies since 1972. Working internationally in the field of RCA, Reliability Center, Inc. has been assisting organizations in defining and achieving their Reliability performance goals, thus positively impacting their client’s productivity, efficiency, safety and their ROI.
